

2026/09/16 13:44 1/1 Motion Playback

⏮: Move to previous frame
When Repeat is selected, the playback will be continuous, i.e., after the last frame, the play back continues with the first frame. The *Playback Speed* controls the speed of the play back relative to real-time.

Motion_Playback

After loading a motion from a CMZ file, the mocap model can be controlled using the playback widget located under the 3D view.
