

Support Format

Users with active support agreements are able to send scripts and data sets to support@has-motion.ca.

Being able to see the relevant files allows the support team to best assist you. Closing the irrelevant files allows support to determine which files you are looking at, and makes the file easier to e-mail.

NOTE: Our server strips attachments larger than 20 MB so it's important to close all but a few trials before sending a CMZ.

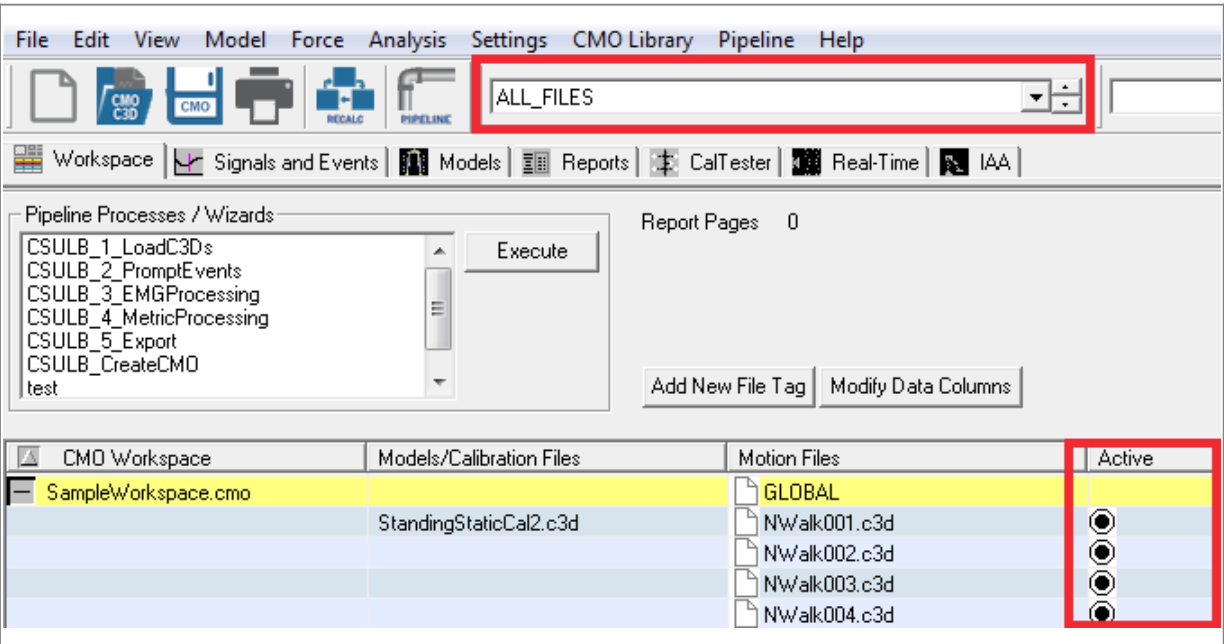

Sending Data

Since the CMO file is most likely too large to e-mail, you can close all dynamic trials (except the relevant C3D file).

1. Open the relevant CMO file

Make sure the active file is set to ALL_FILES

Note that the black circle for all files in the workspace will be listed as ACTIVE

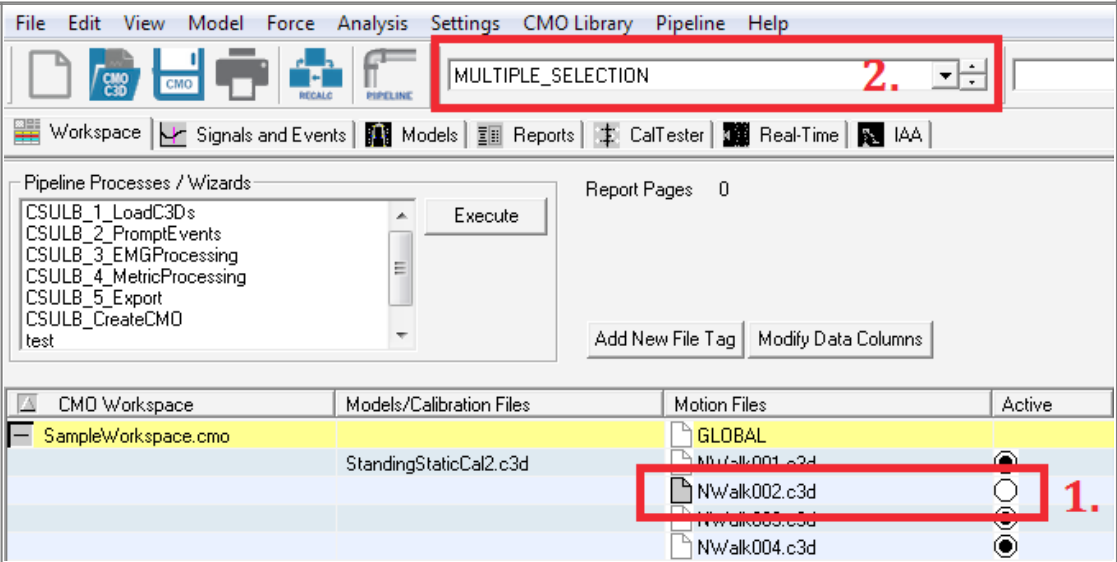

The screenshot shows the software's main window. The 'Settings' menu is open, and the 'ALL_FILES' dropdown is highlighted with a red box. Below the menu, the 'Pipeline Processes / Wizards' list is visible, and the 'Active' column in the 'Motion Files' table is highlighted with a red box.

2. Remove C3D from list of active files

1. Click in the black circle next to the C3D file (or files) you want to **KEEP** in the CMO

2. The circle of the selected file will be filled in white, and the active file will change to MULTIPLE_SELECTION

The screenshot shows the software's main window. The 'Settings' menu is open, and the 'MULTIPLE_SELECTION' dropdown is highlighted with a red box. Below the menu, the 'Pipeline Processes / Wizards' list is visible, and the 'Active' column in the 'Motion Files' table is highlighted with a red box. The 'NWalk002.c3d' file is highlighted with a red box, and its active circle is filled in white.

3. Close C3D files

Go to File → Close

File

Open/Add...
Ctrl+O

Close

Motion Files

GLOBAL

NWalk001.c3d

NWalk002.c3d

NWalk003.c3d

NWalk004.c3d

4. Review File

Only the selected file should remain in the workspace

Make sure that the files in the workspace depict the problem you are having

Questions on Specific Signals

If you're sending a question about a specific metric or signal, the script should only contain the relevant information.

In other words, the pipeline should contain only the specific commands used to create the relevant metric appear.
